# Graph Is How WE THINK

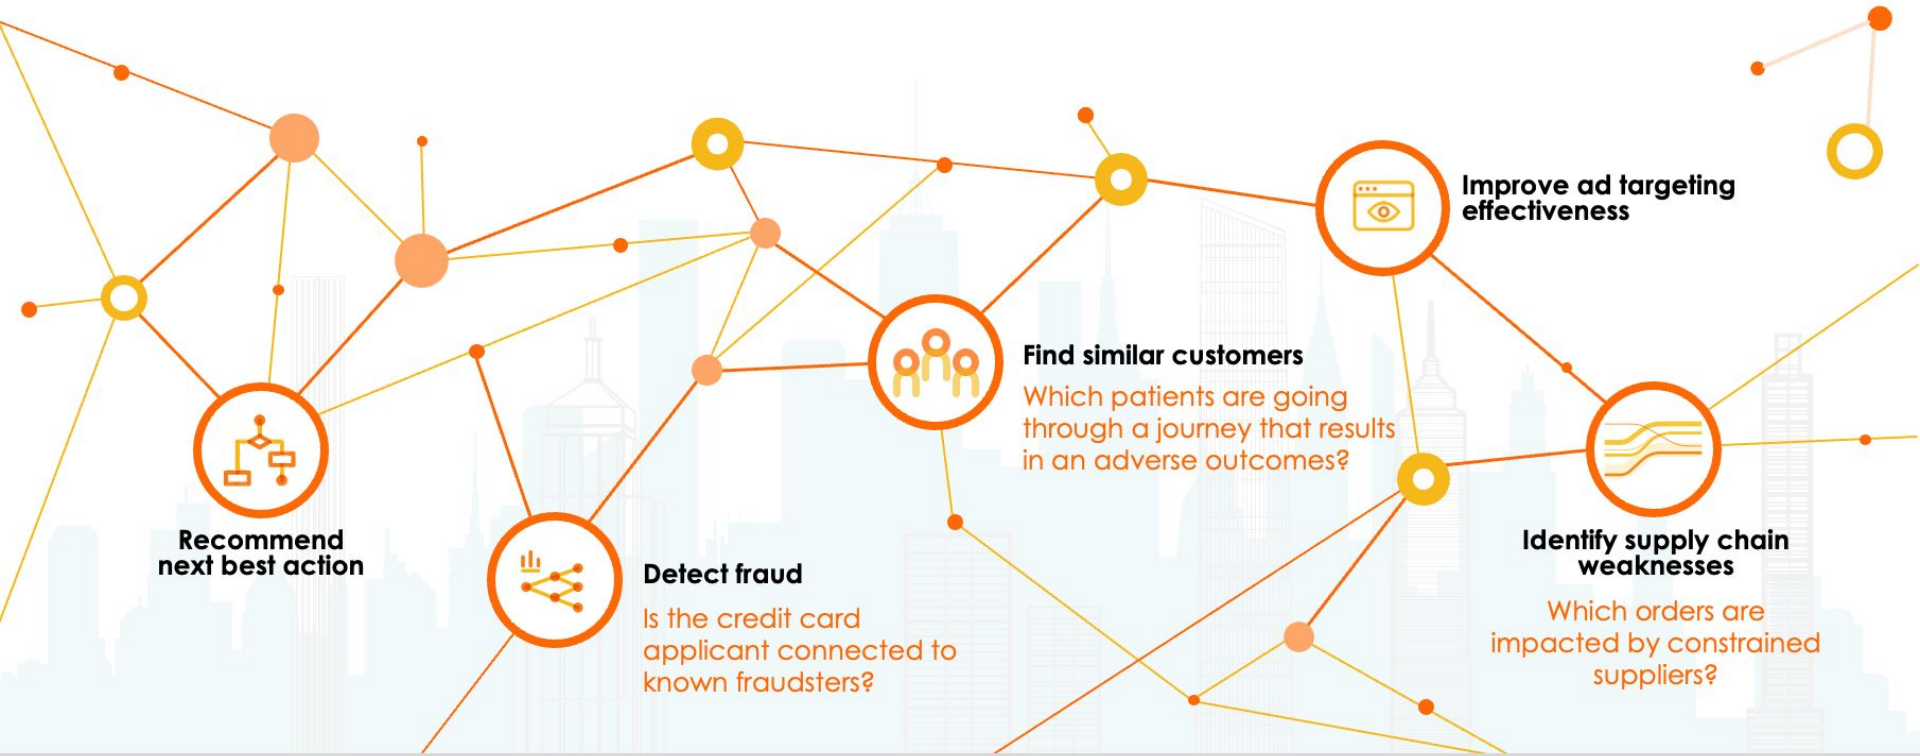

Graph is a natural model for interconnected data. It is an organic way of modeling data for a variety of relationships and transactions.

Identify key data and process massive amounts of data

Use the power of relationships and deep analytics to provide insights

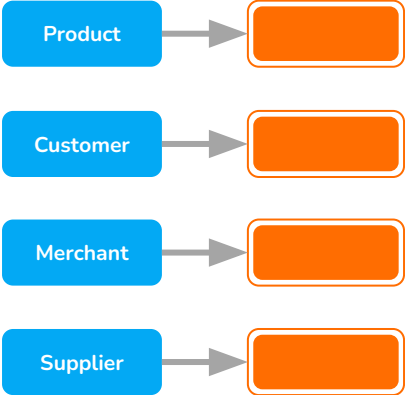

# Modern businesses need intelligent answers to complex questions...

# Graph Stores Data Differently

### Key value

High speed storage / retrieval apps

Product

Customer

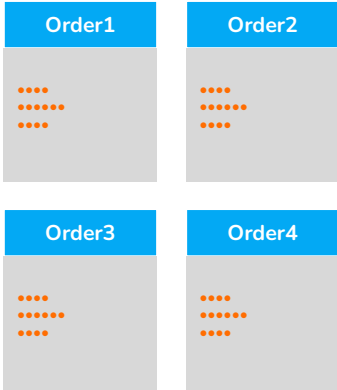

Merchant

Supplier

Shopping carts, real-time bidding, messaging, and chat

### Document

Front-end apps with unstructured data

Order1

Order2

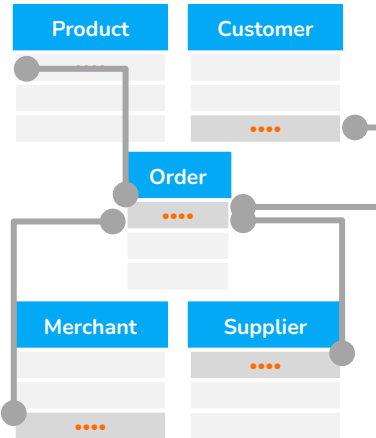

Order3

Order4

Gaming, content management, mobile apps, and IoT

### Relational

Transactional systems of record with structured data

Product

Customer

Order

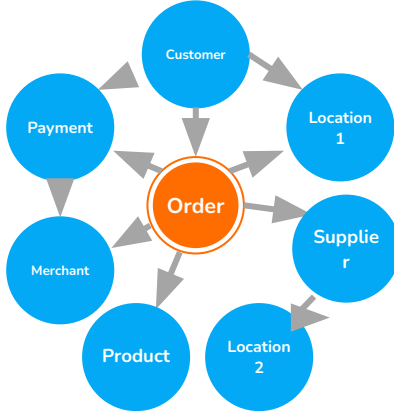

Merchant

Supplier

Customer billing, payroll, inventory monitoring, and bank accounts

### Graph

AI / ML powered apps and wider, deeper analytics

Payment

Location 2

Fraud detection, compliance, supply chain, customer 360, predictive maintenance, IoT Analysis, and EMS

# Relational databases don't tell the whole story

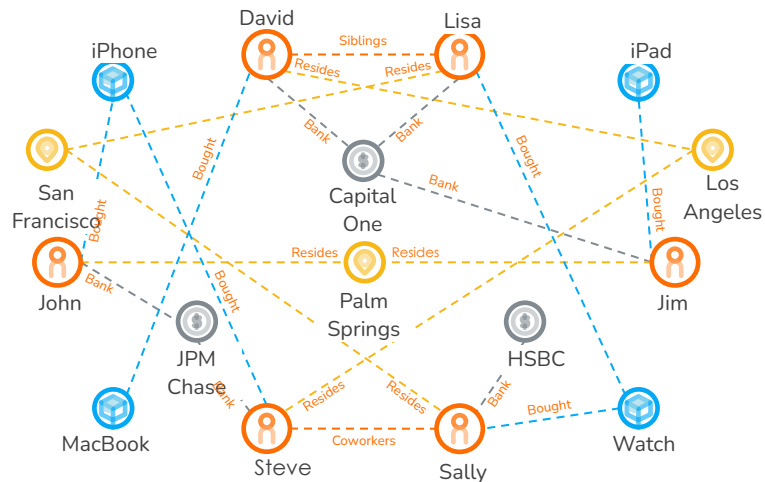

## Relational databases store facts in tables

Name	Location	Product	Bank	•
John	Palm Springs	iPhone	JPM Chase	•
David	Los Angeles	MacBook	Capital One	•
Lisa	San Francisco	Watch	JPM Chase	•
Jim	Palm Springs	iPad	Capital One	•
Sally	San Francisco	Watch	HSBC	•
Steve	Los Angeles	iPhone	JPM Chase	•

- Cannot easily model indirect relationships
- Cannot run queries across data sets without slow joins
- Cannot add new relationships without schema changes

Surface level sampling

## Graph databases view the world as it is

- Flips the perspective from facts to relationships
- Scales massively without sampling
- Faster queries at greater depth

Rich, intuitive analysis

# Graph databases make AI/ML models faster and more accurate

## Richer, smarter data

- Relationships-as-data
- Connect different datasets, break down silos

## Deeper, complex questions

- Look for semantic patterns (implicit relationships)
- Easily and quickly search far and wide

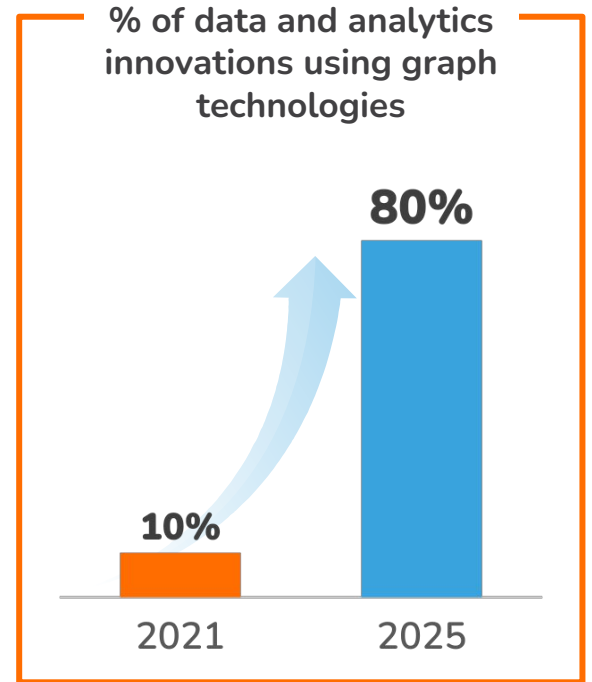

## Accelerated performance

- High-speed queries
- Relationship powered algorithms and machine learning

## Explainable results

- Intuitive models, queries and answers
- Visual exploration and results

Probabilistic Models (PRM)

# Algorithm Types

- ❑ **Centrality**  
Assign numbers or rankings to each vertex corresponding to their network position
- ❑ **Classification**  
Classify the vertices into sets according to some external rule
- ❑ **Community**  
Group the vertices so that each group is densely connected
- ❑ **GraphML/Embeddings**  
Convert the neighborhood topology of each vertex into a fixed size vector of decimal values
- ❑ **Path**  
Find the best paths from one vertex to another (shortest, lowest weight, or other criteria)
- ❑ **Similarity**  
Compute similarity between pairs of items
- ❑ **Topological Link Prediction**  
Predict the existence of a link between two entities in a network
- ❑ **Frequent Pattern Mining**  
Find subgraph patterns that occur the most frequently

# Common Use Cases

Uses cases to apply graph include:

- Entity Resolution
- Customer Journey / C360
- Recommendation Engines
- Supply Chain
- Fraud/AML
- Data Fabric
- Cybersecurity
- AI & Machine Learning

The background is a gradient of orange and yellow. On the left, there are several overlapping circles of varying sizes. On the right, there is a network diagram consisting of several nodes (small circles) connected by lines (solid and dotted). The text "Q&A Break" is centered in the lower half of the image.

## Key Drivers

## Strategic Objectives

## Example Use Cases

Business Value

## Roles / Persona Types

- Execs & Mgt
- Fraud Analysts
- ML & Data Science
- Audit | Compliance
- Technical Teams

# Visualization - Functionality by User

TIGERGRAPH WORKBENCH

EXECUTIVES

## Dashboards & Reports

- Macro Trends
- Drill In Elements

LINE OF BUSINESS

## Analytics & Patterns - Case & Alert Queue

- Credit Card
- Banking Fraud
- AML
- Audit & Compliance
- Cyber
- Sanctions & Prosecution

ALERT MANAGEMENT

## Alert Management - Alert Builder

- Visual & Non Visual
- Alerts & Updates

TEAM INVESTIGATION

## Case & Alert Queue - Detail

- Investigations & Teams
- Findings & Connectivity
- Exploration

ANALYTICS

## Analytics & Exploration Workbench

- ML & Algorithms
- Complex analytics and 'scenarios'
